

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE

The present work is the response to a demand (not at all anticipated) for a French companion to the author's "German-English Dictionary for Chemists." It follows the plan of the earlier book, which seems to have met with general favor.

Prof. F. W. Tanner of the University of Illinois has read the galley proof and added a number of biological terms, and Prof. Frank Vogel of the Massachusetts Institute of Technology has read the page proofs and the manuscript of the Introduction and has also contributed the general statement prefacing the "Conjugation of French Verbs." The author is likewise under obligation to Prof. C. W. Foulk, Mr. E. J. Crane and Dr. Maurice L. Dolt, and to numerous other friends who have given opinions or answered queries.

Reference works chiefly consulted: *General*, Clifton-Grimaux-McLaughlin, French-English Dictionary; the Larousse dictionaries, especially the latest, "Larousse pour tous." *Technical*, Répertoire technologique des noms d'industries et de professions (by French Government officials); Willcox, French-English Military Technical Dictionary; De Méric, Dictionnaire des termes de médecine. The material has been rather scattered, consequently a large proportion has been obtained by the reading of books, catalogs and journals.

A really good dictionary is a growth. No one can realize as well as the author how incomplete the vocabulary of this one still is. The very helpful correspondence regarding errors and omissions in the German-English dictionary leads to the hope that readers will go to the same trouble in this case.

INTRODUCTION

Thanks to the many words which French and English have in common and to the wonderful clarity of French expression, the beginner usually finds it easier to learn to read French than German, especially if he has studied Latin to some account. Separable prefixes, involved sentence order and a certain well known "longwordformingtendency" are not there to trouble him. Chemical names do not present great difficulty. Nevertheless there are pitfalls, such as the numerous idiomatic phrases, the irregular verb forms and the words which, tho posing as old friends, do not mean just what they ought to! These matters the author has tried to keep in mind in the preparation of the dictionary. The following notes may be of assistance in the use of the vocabulary.

Phrases. A large number of phrases has been included. As a rule, a phrase is entered under the first important word which occurs in it, prepositions, conjunctions and articles being passed by (*en détail* under *détail*, *tout d'un coup* under *tout*, etc.).

Verbs. Conjugations of typical regular verbs have been placed at the end of the Introduction in the hope that this may save references to a grammar. Irregular verb forms which are likely to appear in scientific literature are given where they are most needed, i.e., in the vocabulary under their own spellings, and not safely concealed under the parent verb.

General Words. A general vocabulary superior to that of many pocket dictionaries is included with the technical words. The special chemical meaning of a general word is ordinarily placed first.

Words Common to French and English. Words of the same or nearly the same spelling in the two languages are defined even when the meaning is exactly the same as in English. Manifestly, these words are only a selection from among those which might have been included. Especially is this true of the names of chemical compounds.

Derived Words. As a space-saving device the meanings of many words are merely indicated, reference being made to another word which is fully defined. For example, several senses of the verb *brasser* (to stir) are given. A listing of all the corresponding meanings of the noun *brassage* is avoided by using for the latter word the form "stirring, etc. (see *brasser*)." Participles and participial adjectives are often treated in the same way.

Feminine Forms. These are not given except in special cases. The usual sign of the feminine is the letter *e*; thus, *gris* (gray) becomes *grise* in the femi-

nine singular, while *neutre* (neutral) which ends in *e* in the masculine form remains unchanged in the feminine. The following irregularities should be noted:

| | | | |
|------------|------------------|-------------|--------------------------------------|
| -ve (fem.) | corresponding to | -f (masc.); | as, <i>actif, active</i> . |
| -se | " | " -x; | as, <i>nitreux, nitreuse</i> . |
| -se | " | " -r; | as, <i>trompeur, trompeuse</i> . |
| -che | " | " -c; | as, <i>blanc, blanche</i> . |
| -que | " | " -c; | as, <i>turc, turque</i> . |
| -gue | " | " -g; | as, <i>long, longue</i> . |
| -trice | " | " -teur; | as, <i>indicateur, indicatrice</i> . |

Doubling of the final consonant; as, *gros, grosse*.

Plural Forms. The regular formation of the plural is by addition of *s* to the singular. Departures from this rule are:

| | | | |
|------------|------------------|---------------------------|--------------------------------|
| -aux (pl.) | corresponding to | -al, -all or -au (sing.); | as, <i>égal, égaux</i> . |
| -eaux | " | " -eau; | as, <i>nouveau, nouveaux</i> . |
| -eux | " | " -eu; | as, <i>feu, feux</i> . |
| -oux | " | " -ou; | as, <i>caillou, cailloux</i> . |

Nouns ending in *-s*, *-x* and *-z* and masculine adjectives ending in *-s* and *-x* in the singular are unchanged in the plural.

Nouns Used as Adjectives. French differs from English in its adjectival use of nouns. In some instances the use is the same; as, *odeur éther*, ether odor; *solution lilas*, lilac solution. For the most part, however, French nouns used as adjectives might be construed as in apposition; as, *chimiste ingénieur*, chemical engineer; *tube séparateur*, separating tube. On the other hand such English expressions as "sodium chloride" (*chlorure de sodium*) and "gun steel" (*acier à canon*) require the use of a preposition when rendered into French.

Inorganic Nomenclature. Most inorganic names are readily translated from French into English as soon as one learns that *-ure* corresponds to the English *-ide*; *-ique* to *-ic*; and *-eux* (fem. *-euse*) to *-ous*.

Names of hydracids differ in construction from the English names; as, *chlorhydrique*, hydrochloric.

Names of salts containing the preposition *de* should not invariably be translated by using "of." For example, while *acétate de cuivre* is correctly translated "acetate of copper" the form "copper acetate" is more frequent.

Apparently, the older fashion of naming salts from the bases instead of the metals (as *carbonate de soude*, carbonate of soda) is more persistent in French than in English, hence in many cases it would be well to use the modern form (in this case, sodium carbonate) in translating them.

Organic Nomenclature. The use of adjectives in French organic names, instead of a combining form as in English and German, may be noted; thus

the compound $C_6H_4Cl_2$ (dichlorobenzene) is often called *benzène* (or *benzine*) *dichloré*, although *dichlorobenzène* and even the Germanism *dichlorbenzol* also occur.

Names of esters are found in which the name of the alcohol radical is prefixed to the name of the acid; as, *éther amylocétique*. This should be rendered "amyl acetate" rather than "amylacetic ester" or "amylacetic ether" if the compound $CH_3CO_2C_5H_{11}$ is meant, and other cases should be treated similarly.

Words ending in *-ique* are used in a general descriptive sense more frequently than the corresponding English words in *-ic*; *berbérinique*, for instance, would be properly translated "berberinic" if designating an acid, but it often means simply "of berberine" or "berberine"; as, *sels berbériniques*, berberine salts.

German names ending in *-insäure* may usually be translated into French and English in two ways, that is, as *acide -inique* (-inic acid) or as *acide -ique* (-ic acid); and it sometimes happens that the one alternative is chosen in French, the other in English. For example the compound named Levulinsäure is usually called levulinic acid in English while in French the form *acide lévulique* seems to be the more common. Such differences are not numerous.

In order to have names which are in accord with the usage of the American Chemical Society as embodied in the "Directions to Abstractors" the following rules (which also harmonize well with the best usage in Great Britain) should be observed. They are not necessarily to be applied to names of pharmaceuticals and dyes, and possibly some exceptions should be allowed for commercial use only, as *glycerin* instead of *glycerol*. Differences between trade and scientific usage are always to be regretted.

(1) Translate *oxy-* by *hydroxy-* when it designates hydroxyl, as is commonly the case in organic names. When *oxy-* designates the ketonic group (CO) it is preferably translated *keto-*.

(2) Translate names of compounds the chief function of which is alcoholic or phenolic so that the name ends in *-ol*; as, *glycerol*, *resorcinol*, *mannitol*, *pinacol* (not *pinacone*).

(3) When the French ending *-ol* does not indicate hydroxyl it should be translated *-ole* (as, *anisole*, *indole*), or in the case of a few hydrocarbons *-ene* (as *benzol*, *benzene*; *toluol*, *toluène*; *styrol*, *styrene*).

(4) The ending *-ine* or *-in* should be translated *-ine* in the case of basic substances and *-in* elsewhere; as, *aniline*, *glycine*, *palmitin*, *albumin*. Exceptions are *benzine* (meaning benzene) and the names of alcohols and phenols (see (2)).

(5) The form *amido-* should be so translated only when it denotes combination with an acid group. Usually it is to be translated *amino-*; as, *acide amidopropionique*, aminopropionic acid; *amidophénol*, aminophenol. The same holds for *imido-*, *anilido-*, etc.

(6) In such combining forms as *bromo-*, *cyano-*, *chloro-*, *nitro-*, etc., when they denote substituting radicals, the connective *o* is to be used invariably; as

chlorobenzène or *chlorbenzène*, chlorobenzene; *acide chloracétique*, chloroacetic acid. This usage is by no means universal, but those who cannot reconcile themselves to such spellings as "bromoacetic" should at least avoid the German forms bromphenol, acetphenetidine, etc., by using the connective *o* before consonants. (French literature does not contain so many of these objectionable forms as does the German.)

(7) The French ending *-ane* should be translated *-ane* if it is the name of a hydrocarbon (or parent heterocyclic compound) which is *fully saturated*; otherwise, *-an*. Examples: methane, menthane, tolan, furan, pentosan.

(8) Names of acids ending in *-carbonique* are translated *-carboxylic*, not *-carbonic*.

CONJUGATION OF FRENCH VERBS

1. General Statement

(By Professor Frank Vogel)

In general the tenses of *all* regular verbs and of most irregular verbs can be formed or recognized from the five principal parts, viz.: (1) present infinitive, (2) present participle, (3) past participle, (4) present indicative, (5) past definite indicative.

(1) From the present infinitive, by adding directly *-ai*, *-as*, *-a*, *-ons*, *-ez*, *-ont*, the future indicative is formed. Likewise by adding *-ais*, *-ais*, *-ait*, *-ions*, *-iez*, *-aient* the conditional present is obtained, but infinitives in *-re* always drop the *-e*.

(2) From the present participle, by changing *-ant* into *-ais*, *-ais*, *-ait*, *-ions*, *-iez*, *-aient*, we obtain the imperfect indicative; and by changing *-ant* into *-e*, *-es*, *-e*, *-ions*, *-iez*, *-ent* we obtain the present subjunctive.

(3) The past participle with the auxiliary *avoir* for all transitive verbs (but with *être* for intransitives denoting motion, change of condition or position, and for reflexives) forms the compound tenses in the active voice. However, with the past participle and the required tense form of *être* the tenses of the passive voice are formed.

(4) The present indicative gives the imperative by dropping the pronoun of the second person singular and of the first and second person plural, also final *s* of the second person singular in the first (*-er*) conjugation is dropped except when followed by the pronouns *-y* or *-en*.

(5) The past definite gives the imperfect subjunctive by changing the first person singular final *i* or *s* to *-sse*, *-ses*, *-t*, *-ssions*, *-ssiez*, *-ssent*. Note that the third person singular always has a circumflex ($\hat{}$) accent over the vowel (*a*, *i*, *u*) before the *t*.

2. Active Voice (and Intransitive Verbs)

Laver, brunir and *rompre* are used as types of the three regular conjugations in *-er, -ir* and *-re*. See the note about certain intransitive verbs in paragraph (3) of the General Statement.

4. Reflexive Verbs

In the simple tenses, reflexive verbs are conjugated like the corresponding active forms, but with the use of the pronouns *me*, *te*, *se*, *nous*, *vous*, *se* (as the person and number may be). In the compound tenses, in addition to the use of the above pronouns the auxiliary *être* (instead of *avoir* as in the active forms) is employed; thus, *laver* (active), *se laver* (reflexive); *avoir lavé* (active), *s'être lavé* (reflexive).

Reflexive verbs are translated:

- (1) Reflexively; as, *se laver*, to wash oneself.
- (2) Reciprocally; as, *se laver*, to wash each other or one another. (The above two meanings are not usually given in the vocabulary.)
- (3) Passively; as, *se publier*, to be published. (This meaning is often given, especially when it is a customary one.)
- (4) Intransitively; as, *l'or se fond*, the gold melts, gold melts. (Such meanings have been included as far as possible.)

The following inflections must serve as examples for the reflexive verbs:

Present Indicative

je me lave, I wash myself, I wash
 tu te laves
 il se lave
 nous nous lavons
 vous vous lavez
 ils se lavent

Perfect Indicative

je me suis lavé, I have washed myself,
 I have washed
 tu t'es lavé
 il s'est lavé
 nous nous sommes lavés
 vous vous êtes lavés
 ils se sont lavés
